THE WHIP CLIP®

JANUARY 2008 - It's a common frustration among horse riders: having to drop the whip to the ground when it's not needed during training, then having to dismount to pick it up when it is needed. The Whip Clip® personal whip holder designed & manufactured by Dos Equine offers the ultimate solution.

The Whip Clip® is a compact (2 ¼" x 1" x 1"), discreet, two-chambered clip that slides into place over the top of the rider's boot or half chaps. When the crop, whip or bat is not needed, the rider inserts it into the clip - safely, securely and near at hand. The clip's larger, upper chamber holds the whip handle or portions of it; the lower chamber secures the whip shaft. When the whip is needed again, the rider can readily retrieve it with one hand, without dismounting or losing rein contact with the horse.

Manufactured from a thermoplastic material make it strong enough to hold a whip during a walk, trot or canter, yet flexible enough to allow the whip/crop to be inserted and withdrawn easily.

SRP \$16.95, contact your local dealer or call us to find closest dealer or internet site available. Distributed exclusively by Intrepid International 800 347 0033.
